

Neosun Energy Joined Industry Leaders at Middle East Energy

The Neosun Energy team, led by the CEO, Ilya Likhov, participated in the Middle East Energy exhibition in Dubai this April. As one of the leading global events in the energy sector, the exhibition brought together top professionals and innovators in renewable energy. This year's event featured over 1,600 exhibitors from 90 countries, presenting the latest advancements in energy solutions.

During the visit, the NEOSUN team had the opportunity to meet with potential partners and engage with industry leaders. The exhibition was a key platform for networking, allowing Neosun Energy to explore new business opportunities and discuss the future of sustainable energy with key market players.

Attending the Middle East Energy exhibition highlights Neosun Energy's commitment to staying at the forefront of the renewable energy industry.

The event provided a unique chance for the company to exchange ideas with global experts, ensuring that Neosun Energy remains responsive to the rapidly evolving energy market.

During the exhibition, Ilya Likhov, CEO of Neosun Energy, gave an exclusive interview to media partners of the event. The press showed significant interest in the company's innovative solar solutions, particularly the [Solar Charging Stations](#) and the [PowerHub](#) system.

“Events like Middle East Energy in Dubai are more than just industry meetups. They’re a chance to get fresh ideas, understand where the market is going, and make sure you’re on the right track. It’s also the perfect opportunity to see how others present their products — from design and marketing to the tech itself. I’ve made a clear decision: starting from the next major exhibition, NEOSUN Energy will be exhibiting too.

We’ve developed some really great products — solar panels, energy storage systems, batteries and more. Up until now, we’ve mostly used them in the solar power plants we build. But now it’s time to take things further — to actively sell our equipment to the global market. Really proud of the direction we’re heading in, and inspired by all the great conversations during the event”, – shared CEO of NEOSUN Energy, Ilya Likhov.

About Neosun Energy

[Neosun Energy](#) is an international Solar EPC company that provides Commercial Solar PV & Energy Storage Solutions (ESS) with capacity from 200kW to 10MW for Commercial and Industrial projects Worldwide. The company constructs solar power plants and energy storage systems (ESS) on a turn-key basis, covering all stages of construction including design, equipment supply, construction, and commissioning. The company has implemented solar PV projects in 16 countries worldwide.
